

MEET OUR FLEET

Bonfils Blood Center's staff and vehicles travel more than 336,000 miles each year to conduct blood drives, deliver supplies and equipment to our community donor centers and transport blood products around the state. Bonfils uses nine primary vehicle models, each serving a different and important purpose, that make up our fleet of 46 total vehicles. We have a robust vehicle preventive maintenance plan to extend the miles they can travel and ensure they are safe for our staff and donors. However, many of these vehicles are approaching the end of their lives and need replacement.

Bloodmobiles

Bonfils' bloodmobiles can be found parked at farmer's markets, downtown streets and other gathering places. These self-contained donor centers on wheels can accommodate up to six blood donors at a time. Bloodmobiles are the ideal option for organizations and communities seeking to host drives without space to hold a drive indoors. Bonfils' seven bloodmobiles range in age from seven to 19 years old.

Shuttles and Sprinters

Used to carry staff and blood drive equipment such as portable donor beds, collection supplies and canteen items, Bonfils' shuttles and sprinters travel to businesses, service clubs, churches and other organizations for indoor blood drives. Bonfils has four shuttles that range from 10 to 13 years old and three sprinters that are each six years old.

As part of the *Build a Fleet Campaign*, Bonfils must purchase two new self-contained shuttles and five new sprinters between 2014 and 2016 to maintain our blood drive operations for our community.

Vans

Similar to our sprinter vehicles, Bonfils' vans carry equipment needed for blood drives that are held in spaces like conference rooms in addition to delivering supplies to our multiple community donor centers throughout the Front Range. These are particularly ideal for transporting staff members and supplies needed for smaller blood drives where parking is limited. Nine vans are part of Bonfils' fleet and range in age from 11 to 15 years old.

Passenger Vehicles

Passenger vehicles are used across Bonfils for more than mobile blood drive support. They are used to pick up blood from our mobile drives and community donor centers, transport staff to training sessions and company events and make blood deliveries to hospitals. Bonfils currently has four passenger vans that are each over a decade old and seven sedans and crossover vehicles. The majority of these seven vehicles were purchased before 2001.

While three of the seven sedans/crossover vehicles are 2012 models, Bonfils needs to purchase one new crossover vehicle to replace a 1998 sedan.

Box Truck

This vehicle is a work horse for Bonfils. It has a lift gate for large orders stored on pallets and is used to make bulk deliveries of supplies and equipment across the Front Range. It is also used to deliver materials for Bonfils events such as Drive for Life and our annual golf tournament. We have one box truck that just celebrated its 10th birthday in 2014.

Utility Trucks

Bonfils has three pick-up trucks used by our facilities and fleet staff for a variety of maintenance tasks necessary to conduct our lifesaving work including security patrols of our headquarter facility and laboratory and more. One truck is new, but the other utility trucks range in age from 13 to 22 years.

Bonfils Blood Center invested in a new pick-up truck in early 2014 used for snow plowing to help ensure the safety of our employees, blood donors and guests during winter months.

Trailers

As part of the *Build a Fleet campaign*, four hitched trailers will be added to our vehicle fleet. These trailers will be used with smaller vehicles, such as the sprinters or passenger vehicles, to haul specialized blood collection equipment. These trailers are a vital addition because they will allow us to take equipment across the state without having to purchase customized vehicles.
